

ENVIRONMENTAL POLICY

Rea Valley is committed to minimising the effects of our business on the environment. We assess the environmental impacts of our operation and set objectives and targets, which are regularly reviewed, to improve environmental performance.

We:

- Promote responsibility for the environment within our organisation and ensure this policy is implemented at all levels within our workforce
- Actively work to reduce the use of energy, water, and other resources
- Re-claim waste energy where possible
- Actively work to improve efficiencies converting raw materials into finished goods
- Minimise waste by reduction, and recycling methods, and we ensure effluent waste is processed to highest standard possible before being sent for onward treatment, at approved Contractors in line with industry best practice.
- Ensure our raw material and packaging suppliers have their own environmental policies in place and are monitoring the impact of their own operations on the environment
- Ensure our raw material suppliers use the minimum amount of packaging necessary to safeguard the raw materials supplied
- Ensure our packaging suppliers use recycled material in their manufacturing process if possible, and that finished packaging is where possible, recyclable
- Ensure Compliance with all relevant environmental legislation/regulation
- Ensure that our policies and procedures are developed in a way that is complementary to this policy
- Consider environmental impact in the planning stage of any projects or expansion to existing facilities
- Identify and provide appropriate training, advice, and information for staff
- Ensure appropriate resources are provided to meet the commitments of this policy
